

PRÉSENTATION

The shape and curves of the Ortaer support pad have been designed to provide maximum comfort in a kneeling position. The load is distributed along the leg, fully relieving the knee joint and preventing compression of soft tissues, which are a source of pain and various pathologies.

Particular attention has been paid to the fastening system: the soft texture, the raised shape of the pad, and the highly flexible elastane strap ensure excellent leg support without restricting blood circulation.

To optimize the prevention of musculoskeletal disorders (MSDs) and improve comfort, two types of pads are available: the Mini GOSA, designed for short-duration continuous support, and the longer GOSA, offering a larger contact area for prolonged support.

Eliminate
all pressure
on the knee
